

The American Prosthodontic Society
Promoting the Advancement of Prosthetic Dentistry Through Clinical Research and Education

The American Prosthodontic Society 2024 Webinar Series - November

Speaker – Dr. Jim Janakievski DDS MSD

Title

Interdisciplinary Treatment Strategies: Managing a Patient with Traumatic Loss of Multiple Teeth

Abstract

Planning and sequencing treatment for patients that experience dental trauma can often be challenging. Dental trauma can result in tooth loss, severe alveolar bone deficiency and a deficient soft tissue framework. Interdisciplinary treatment strategies are often required to develop adequate recipient sites for the definitive prosthetics. This presentation will review strategies and techniques to create an aesthetic tooth proportion and a healthy gingival architecture for teeth, pontics and implants.

Learning Objectives

- Learn how interdisciplinary treatment is used to manage the dental trauma patient.
- Learn about the strategies and techniques needed to optimize outcomes.
