

**The American Prosthodontic Society  
Celebrating Young Clinicians - September 25, 2021**

**Speakers – Conrad J. Rensburg & Jack Marrano**

**Course Title**

**Technology the link from Surgery to Final**  
*Guided surgery and immediate conversions the ultimate link to  
restorative efficiency.*

**Objective**

This meeting will demonstrate how well implemented technology creates a true synergy between the clinical and technical teams.

By utilizing advanced diagnostic and surgical planning software, the surgeon plays an integral part in facilitating a predictable restorative outcome.

When these modern-day technologies are understood and implemented correctly, it leads to a diagnostically driven surgery which ultimately facilitates a stress-free final delivery.

Through case studies, this lecture will demonstrate how the restorative, surgical and technical teams now combine to create a very efficient partnership.

**Discussion points:**

- Guided surgery from digital planning to placement
- Predictable latched surgical conversions – The restorative link
- Hybrid restorative process – One hybrid two appointments
- Innovative restorative materials – More esthetic & economical than ever
- No more broken acrylic hybrids – Innovative materials

## **Learning Objectives**

To provide the clinical team with a sound understanding of:

- the restorative advantages of a diagnostically driven surgical approach
- modern-day restorative and surgical options
- restorative materials available to restore the edentulous arch
- advantages associated with each protocol and material
